

PrintMatik instead of TeleMatik

Send your orders, documents, instructions, activity reports etc. as an email to the driver or vehicle by printer!

Why *FrontDoor/PrintMatik* ?

- The driver returns late, but should already take the order documentation for the following day with him.
- You would like the driver to also target an (off)loading location, and the driver needs more information or a collection receipt.
- The driver has lost his way and the navigation system does not recognise the newly built area.
- The driver is subjected to a check by the authorities and does not have the EU Attestation of Activities for the last holiday week with him.
- Do you know of similar scenarios, and have not been able to deal with them efficiently up to now? ***PrintMatik*** will help simplify communication with the driver by means of **printouts!**

What does *FrontDoor/PrintMatik* do?

- ***PrintMatik*** provides information (email) that should/must be available to the driver as quickly as possible, via a **printer**.

How does *FrontDoor/PrintMatik* work?

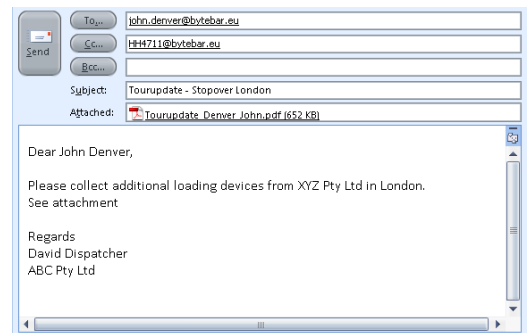

- An email account with alias addresses [DriverCardNumber@bytebar.eu, Forename.Surname@bytebar.eu or VehicleIdentificationNumber@bytebar.eu, VehicleRegistrationNumber@bytebar.eu] is automatically created in Bytebar for every driver/every vehicle.
- You can use any email program (Outlook, Thunderbird, WebMail) to send messages with a PDF attachment of up to 18 pages to the alias addresses.
- The ***PrintMatik*** orders to the driver are automatically sent after authentication via the driver card (digital tachograph), using the nearest available **printer**.
- The ***PrintMatik*** orders to the vehicle are automatically sent directly to the **printer** in the vehicle.

Why *FrontDoor/PrintMatik* ?

- **Automated:** No interaction / operation required by the driver, and no training effort
- **Standards at no charge:** No investment in hardware/software and training on the part of the dispatcher required
- **SPAM protection:** You determine who may send information to the driver / vehicle
- **Data protection:** Driver-specific documents are only printed after authorisation using the driver card in the digital control device
- **Confirmation of sending:** Feedback to the sender if information has not been delivered
- **Always up-to-date:** Information expires after a defined period of time (no bits of paper everywhere)
- **Location-dependent. PrintMatik** is available worldwide on FrontDoor workstations (also in a vehicle) with a card reader and **printer**
- **Useful added benefits:** Parallel reading and archiving of the driver card

What does *FrontDoor/PrintMatik* require?

- Windows XP or higher
- .NET Framework 2.5
- Chipcard reader
